SECTION B: Choose 1 Category in this section

Tick the number where applicable and add them at the bottom of Section B

The following management factors reduce the risk of Johne's disease in this herd:

The herd is not in the GoatMAP, but has had a Check Test ⁽⁶⁾ with negative results in the past 12 months	1 <input type="checkbox"/>
The consignment of goats are Approved Vaccinated Goats ⁽⁷⁾	1 <input type="checkbox"/>
The consignment of goats has been reared under a nationally approved and independently audited kid rearing plan ⁽⁸⁾	1 <input type="checkbox"/>
RISK MANAGEMENT RATING FOR SECTION B:	

TOTAL ASSURANCE RATING = A + B =.....

1. Risk Factors:

(a) The herd contains goats that were born or raised with dairy goats.

The herd contains dairy breeds or dairy cross breed goats. *Exceptions are* goats that are from Goat MAP herds, or goats born and raised in WA.

(b) The herd has grazed land in the past 5 years that is at risk of Johne's disease (JD) contamination. Land at risk of JD contamination includes land that is being grazed, or has been grazed in the preceding 12 months, by:

- Dairy breeds or dairy cross bred goats, which are not sourced from GoatMAP herds.
- Goat herds with RD2 or lower status.
- Dairy cattle with a Dairy Assurance Score of less than 7.
- Beef cattle, other than those in the CattleMAP, Johne's Beef Assurance Score 6 or greater.
- Sheep other than SheepMAP flocks from areas without an audited Regional Biosecurity Plan which includes ovine Johne's disease.

2. RD2: A herd which has had a second negative herd test of all animals over 12 months of age in the herd, at least 2 years after RD1 status was achieved. This is part of an Approved Property Disease Management Plan approved by the Chief Veterinary Officer (CVO) of the jurisdiction.

3. RD1: A herd with a history of infection which has had 1 negative herd test of all animals over 12 months of age in the herd, at least 12 months after the last infected animal was removed from the herd. This is part of an approved Property Disease Management Plan approved by the CVO of the jurisdiction.

4. Infected but undertaking an approved Property Disease Management Plan: An infected herd that has not yet progressed to RD1 status but is complying with an on-farm disease control program combining elements of testing, kid rearing and biosecurity that has been approved by CVO of the jurisdiction.

5. Infected or suspected of being infected: Means infected or suspected of being infected with JD. Herds are no longer regarded as infected or suspected of being infected when a Property Disease Management Plan, which has been approved by the CVO of the jurisdiction, has been completed.

6. Check Test: A test of 50 homebred goats over 12 months of age in the herd (or all goats over 12 months of age in smaller herds) by serology or faecal culture or pooled faecal culture of 2 pools each of 25 goats, with negative results. The animals should be selected so as to increase the probability of detecting infection, i.e. older animals, animals in poor body condition.

7. Approved Vaccinated Goat: A goat that is:

- Vaccinated with an approved JD vaccine by 16 weeks of age; or
- Vaccinated with an approved JD vaccine after 16 weeks, when the flock
 - was in the GoatMAP, or
 - had undertaken a negative Sample Test by PFC in the 2 years preceding the vaccination; or

8. Nationally approved kid rearing plan: A kid rearing plan designed to minimise the spread of JD in intensively managed herds, which has been documented and agreed by GICA and Animal Health Committee.
